Submitted (01-AUG-2001) Takuji Sasaki, National Institute of Agrobiological Resources, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/, Tel:81-298-38-7441, Fax:81-298-38-7468)

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them

The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specificities of peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a set of peroxidase genes found in plants, especially rice, and their homologues, modified forms and fragments, where the sequences of the peroxidase genes in the set are given in AAH44071 to AAH44091. Also described are: (1) promoters for the control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA, to a peroxidase set by isolating RNA from the plant, binding the RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New set of rice peroxidase genes for analysis of peroxidase exin rice under varying conditions and production of rice plants desired characteristics \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 152-155; 258pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fragments, where the sequences of the peroxidase genes in the set are given in AAH44071 to AAH44091. Also described are: (1) promoters for the control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a membrane, mixing with a labelled peroxidase gene set, incubating, and celecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene expression analysis. The set of genes are used for the analysis of the camponent tissues and under different environmental conditions, and their component tissues and under different environmental conditions, cand modification of rice plants to provide desired specificities of celections and the component tissues and under different environmental conditions, and conditions of rice plants to provide desired specificities of the peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Вb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Qy
                                                    The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AnH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a cCC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene capression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and conditication of rice plants to provide desired specificities of CC peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.

```

The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC presents, where the sequences of the peroxidase genes in the set are CC given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using the CC the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene component tissues and under different environmental conditions, their component tissues and under different environmental conditions, candidification of rice plants to provide desired specificities of CC peroxidase gene expression to impart particular characteristics to the CC plants such as response to bacterial infection by Magnaporthe grisea.

Sequence 1223 BP; 234 A; 397 C; 338 G; 254 T; 0 other;

CC encoding caffecyl-CoA 3-O-methyltransferase (CCOAMT), cinnamyl alcohol
CC dehydrogenase (CAD), caffeic acid O-methyltransferase (CCOAMT), cinnamyl alcohol
CC cinnamate-4-hydroxylase (CAH), cinnamyl-CoA reductase (CCR), peroxidase
CC cinnamate-4-hydroxylase (FAH), cinnamyl-CoA reductase (CCR), peroxidase
CC cinnamate-4-hydroxylase (FAH), peroxidase
CC cinnamonia lyase (PAL) or 4-coumarate:COA ligase (4CL) from perennial
CC ryegrass (Lollum perenne) or fescue species. (1), its nucleotide
CC sequence information and/or single nucleotide polymorphisms is useful as
CC sequence information and/or single nucleotide polymorphisms is useful as
CC blosynthesis and/or cellulose degradation in a plant to manipulate cell
CC blosynthesis and/or cellulose degradation in a plant to manipulate cell
CC walls. (1) or its fragments are useful for isolating cDNAs and genes
CC encoding homologous proteins from the same or other plant species, as
CC walls. (1) or its fragment are useful in amplification protocols
CC to amplify longer nucleic acids or its fragments encoding homologous
CC genes from DNA or RNA. (1) or its fragments are useful as molecular
CC genetic markers for quantitative trait loci (QTL) tagging, QTL mapping,
CC tagging QTLs for herbage quality traits, dry matter digestibility,
CC trepital stature, leaf and stem colour. The present sequence represents a
CC Lollum perenne (perennial ryegrass) nucleotide sequence from the present
CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel nucleic acid encoding lignification and cellulase enzymes their related enzymes useful for modifying lignin biosynthesis cellulose degradation in plants to manipulate plant cell wall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 8; Fig 105; 436pp; English

fragments, where the sequences of the peroxidase genes in the set are control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a membrane, mixing with a labelled peroxidase gene set, incubating, and detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene capters of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specification of rice plants to provide desired specifications of the peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.

                                                                       The present sequence represents the cDNA sequence of a peroxidase P7X gene. The P7X gene is isolated from maize inbred line Mp307. Peroxidases reduce hydrogen peroxide or molecular oxygen in the presence of an electron donor. Plant peroxidases are involved in pathogen defence responses. DNA constructs or transcription cassettes comprising peroxidase P7X gene and its promoter are useful for providing nematode resistance in plants.
                                                                                                                                                                              Claim 1; Fig 3; 34pp; English.

                                                                                                                        В
                                                                                                                                                 Š
                                                                                                                                                                                    В
                                                                                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                                 The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CF fragments, where the sequences of the peroxidase genes in the set are given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene expressed in the sample plant; and (4) DNA microarrays for peroxidase gene capters of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and component tissues and under different environmental conditions of rice plants to provide desired specifications to peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to be acterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ohashi Y,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes isolated polynucleotides and proteins cencoding and representing the enzymes cinnamate 4-hydroxylase (C4H).-CC commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (C4T), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-coA reductase (CCR), phenylalanine ammonia-lyase (PAL), 4-commarate:COA ligase (4CL), CC coniferol glucosyl transferase, caffecyl co. coniferin beta-glucosidase (CBC), coniferin beta-glucosidase (CBC), CC cafeic acid methyl transferase, caffecyl COA methyl transferase, caffecyl COA methyl transferase, close, commerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol commerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol commostition and the structure of a plant, especially eucalyptus and pine composition and the structure of a plant, especially eucalyptus and pine content, composition and structure of a plant, especially eucalyptus and content, composition and structure. They can be used for designing probes can be useful for detecting similar DNA and RNA sequences in any cransism and for PCR amplification. The lignin content can be efficiently composition and the polynucleotides. AAA67908 to AAA68201 and AAB16341 to CC exemplification of the present invention.
